

The DigiCue Blue™ is a small electronic coach that fits inside either one of the included rubber housings and attaches to the end of your pool, snooker, or billiards cue. The device communicates with a smartphone app and helps improve your game.

HOW TO USE

1. Insert the DigiCue Blue™ into the rubber housing that best fits your cue (there are two sizes) with the power switch notch aligned with the center of the DigiCue® Logo. See Image A.
2. Push the DigiCue Blue™ down towards the bottom of the rubber housing so that the Power Button Circle is in line with the power button on the DigiCue Blue™. See Image B. A rib on the inside of the housing will hold the DigiCue Blue™ in place.
3. Slide the rubber housing all the way onto the butt end of your cue, so that end of your cue makes physical contact with the plastic DigiCue Blue™ plastic cap inside the housing.
4. Download the DigiCue® app to your mobile device. Both iOS and Android apps are available.
5. Follow the on screen instructions to connect your DigiCue Blue™ to the app.
6. Play your favorite billiards game. The DigiCue Blue™ will vibrate when a fault is detected in your stroke, and will wirelessly send information to your mobile device. The app is fully customizable and allows you to measure many aspects of your stroke at once or just focus on one thing (you choose)!
7. To remove the DigiCue Blue™ from the rubber housing, push with your thumb on the spot on the rubber housing as indicated in Image C and it will dislodge the DigiCue Blue™. **DO NOT** push up from the very bottom of the rubber housing as this could damage the DigiCue Blue™

Battery Replacement:

Non-rechargeable CR2032 lithium-ion battery
